

NEW ORDER RECEIVED FOR COLD MILL OPTIMIZATION IN THE KINGDOM OF BAHRAIN

Gulf Aluminium Rolling Mill B.S.C. (GARMCO), the Bahrain-based international aluminium rolling mill has entered an agreement with the Italian-based company Globus S.R.L. in an effort to optimize an existing Four High Cold Rolling Mill located at GARMCO's premises in Sitrah, Bahrain.

The two Companies will work together to implement a fully customized and high-performance strip blow-off system for cold mill back-up rolls.

This system will be designed to reduce the amount of coolant oil residual on the strip's surface, thus reducing oil consumption during the rolling process. The system will also lower oil contamination of the water used in the subsequent coil cleaning processes, extending the maintenance interval of filtering units.

The Globus Strip Blow-off System, which demonstrated to have a major positive impact on the economy as well as the environment, is one of the cornerstones of the Green Innovation Concepts, our Business Unit that was created to generate new ideas and develop tailor-made solutions that aim to reduce carbon footprint.

This installation enlarges the list of customized Blow-off Systems and equipment manufactured by Globus for mill retrofits.
